Continuation of 11. does NOT place the application in condition for allowance because: It is respectfully pointed out Applicant's arguments are not persuasive. Applicant arguments pertain largely to whether one of ordinary skill in the art would have been motivated to comprise Applicant's claimed invention in view of the applied prior art. Examiner considers the secondary references to provide proper motivation and teachings to modify the base reference to comprise Applicant's claimed invention. Examiner also considers the combination of references to not teach away or otherwise prevent one of ordinary skill from making the combinations without undue experimentation. Please note that a teaching of an improvement does not preclude the option to provide further improvement. It is well known that nothing is perfect - everything can be improved upon, so improvements in the base reference will NOT lead one of ordinary skill in the art to ignore the opportunities for further improvements taught by secondary references. Also, the art of liquid crystals is a fairly advanced technological art wherein complexity is not considered so daunting as to preclude combining per the motivations and teachings of the secondary reference(s).
